PROFILE

First-year M.Tech CSE (Integrated) student with hands-on experience in web development, cybersecurity and machine learning projects. A fast conceptual learner, always seeking new opportunities to develop my skills.

CAREER OBJECTIVE

Curious learner who wants to understand how things work, especially networks and the threats against them. In 5 years, I aim to be a cybersecurity specialist and security engineer who builds AI and ML-powered systems that protect people and networks from threats such as rogue cell towers. I am building a strong base in programming, Linux and secure web development, and learning through hackathons, projects and technical talks.

Strengths: Fast conceptual learner · Clear technical communicator · Hackathon-tested problem solver

Interests: Cybersecurity · Networking and cyber threats · Building and training AI and ML models · Learning how things work

EDUCATION

M.Tech Computer Science and Engineering (Integrated 5-Year Course)
Sri Ramakrishna Engineering College (SREC), Coimbatore · 1st Year

Class XII – 530 / 600 marks · CMS Vidya Mandir MHSS
Class X – 480 / 500 marks · CMS Vidya Mandir MHSS

TECHNICAL SKILLS

Programming: Python, C, C++
Web Development: HTML, React, TypeScript
Database: MySQL
Tools: Git, GitHub, Google AI Studio
Currently Learning: Linux commands, SQL queries, API testing

PROJECTS

TamizN Visa – Tamil Nadu Trip Planner (React, TypeScript)

- Bilingual (English + Tamil), mobile-first web app · React + TypeScript
- 38 districts · 72 curated experiences · 8-step personalized planner
- Explainable itineraries · crowd badges · offline trip dossier
- Zero-fabrication data principle
- Tamil Nadu Tourism Innovation Challenge 2026 · Live prototype: tamizn-visa.ai.studio

TriShield – Rogue Cellular Tower Detection (Cybersecurity)

- Built for the OWASP Cybersecurity Hackathon (runner-up): detects rogue cell towers that a phone cannot tell apart from genuine ones.
- Trust score out of 100: 70 points from rule-based checks on tower data, 30 from an Isolation Forest model.
- Tamper-proof report with direct complaint filing on the cybersecurity portal, map view, custom score weights and an attack simulation.

Key Notes: Rogue tower detection · 70 + 30 trust score · Isolation Forest · Tamper-proof report · Complaint filing · Custom weights · Map view · Attack simulation · 3-step verification

Anomaly and ML Systems

- Explored anomaly detection using Isolation Forests.

30+ Vibe-Coded Apps – for SREC and personal use

- Built over 30 apps with AI-assisted (vibe) coding, for SREC and for my own use.
- SREC: a blood donation app for the college.
- Personal: apps that make my own daily tasks easier.

ACHIEVEMENTS

- **Runner-up**, OWASP Cybersecurity Hackathon
- **Third Prize**, Invictus'26, GCT College, Coimbatore

TECHNICAL PRESENTATIONS

Technical Seminar – Quantum Computing

- Delivered a seminar on Quantum Computing to fellow first-year students at SREC, explaining complex concepts to a student audience.
